

Honeycrisp Apple Tree

Charming pink-white flowers provide a showy spring display, then produce large, showy red fruit with exceptional flavor and crispness. Great for fresh eating, cooking or pressing for cider. Stores well in cool conditions. Plant another apple variety such as 'Red Delicious' or 'Fuji' for best fruit set.

Reaches 20-25 feet tall, 10-15 feet wide.

Full Sun

Water deeply, regularly during first few growing seasons to develop an extensive root system; once established, reduce frequency to weekly, or more in extreme heat or containers.

Landscape Supply Inc.

- Prune in late winter or just after flowering. Light pruning is useful for keeping plants healthy, improving form, and correcting structural problems.
- Heavy cuts of one-inch or more should be avoided since they induce excessive water-sprout growth that will ultimately fill in the tree center.
- It is important to disinfect pruning tools after each cut since pathogens can be spread by pruning tools.
- Don't use a general fertilizer; you can apply a specially-formulated fertilizer for fruit trees as needed during the growing season. Follow the directions on the package so as not to burn the young tree roots.
