

Green Giant Arborvitae

A large, vigorous, fast-growing evergreen. Its natural pyramidal to conical form boasts dense, rich green foliage that darkens or bronzes slightly in the winter. This is an exceptional landscape tree for use as a screen, hedge or single specimen. It is also resistant to wind once established and can withstand heavy ice or snow, making it a good choice for a natural windbreak.

Quickly reaches 25-30 feet tall; 8-10 feet wide.

Partial Shade to Full Sun

Water regularly - weekly, or more often in extreme heat.

Many arborvitae take on a nice pyramid shape without pruning. If you must prune then limit it to once a year and keep the following in mind:

- Prune in the fall or early winter.
- Ideally, main side branches should be at least $\frac{1}{3}$ smaller than the diameter of the trunk.

- Never remove more than $\frac{1}{4}$ of a tree's crown in a season
- Prune in Summer; if pruned in the summer the tips of the pruned branches may turn brown
