

Red Obelisk European Beech

A handsome, columnar, specimen tree with deep purple, crinkled foliage all season long. Its slow growth and naturally narrow form make it an ideal low maintenance tree for residential landscapes. Adds striking vertical interest to larger areas. Its smooth silver bark is an attractive element in winterscapes.

Reaches 35 feet high; 12 feet wide.

Full Sun to Partial Shade

A newly planted beech tree needs regular watering during its first year or two. Once established, it can tolerate dry spells but should be given extra water during drought.

- Do provide adequate drainage and avoid “clay bowls” that are notorious for holding water and predisposing plants to the compost heap.
- Do apply mulch to a depth of 3-4”, your mulch ring should be the same diameter as the canopy above. Avoid piling the mulch around the trunk and creating the unfortunate “mulch volcano”.
- Don’t plant too deep; pay attention to the root flare in relation to the surrounding grade. A tree too high or deep will result in a tree under stress.
- Don’t forget to do an annual inspection looking for any deadwood or damage seasonally.
