

# Heritage River Birch

A beautiful, multi-branched tree prized for its highly textural, colorful, peeling bark. An exceptional silhouette for night lighting. Provides striking winter interest. This versatile, highly heat tolerant tree thrives in riparian settings with high water tables and problematic low wet soils, yet adapts to mild drought when established.

Quickly reaches 40 to 60 feet tall and wide; 70 feet tall in ideal conditions.

Full sun

Water regularly to maintain wet or evenly moist soil - weekly or more.

- Do apply mulch to a depth of 3-4", your mulch ring should be the same diameter as the canopy above. Avoid piling the mulch around the trunk and creating the unfortunate "mulch volcano".
- Do provide adequate moisture throughout growing season especially during establishment; with a name like river birch it's safe to say it will handle a lot of water.
- Don't plant too deep; pay attention to the root flare in relation to the surrounding grade. A tree too high or deep will result in a tree under stress.
- Don't forget to do an annual inspection looking for any deadwood or damage seasonally.
