

# Kwanzan Cherry Tree

The Kwanzan Flowering Cherry Tree is easily the showiest of all Cherry Trees. Its flowers aren't just pink... but 'Double Pink,' meaning you get twice as many petals and twice as many blooms as found on other trees. It blooms in large clusters of 3-5 flowers! These clusters are the thickest of all pink flowering trees and look similar to carnations. Blooms in April, also a delight in the fall, when it will give you golden autumn leaves that grab everyone's attention.

Reaches 30-40 feet tall and wide.

Full Sun

Low trickle base to the root zone every other day for the first 2 weeks. Weaning to every 3<sup>rd</sup> week 1x per month; supplementing during times of drought.

- Do provide organic matter when backfilling rootball, adequate mulch layer and protection from hot afternoon sun.
- Do use sharp, clean tools when pruning; ragged stems and branches from dull tools leaves your plants open to various pest and disease.
- Don't plant too deep; pay attention to the root flare in relation to the surrounding grade. A tree too high or deep will result in a tree under stress.
- Don't neglect to thin the interior over time; as a member of the rose family, cherry thrives with good air circulation to interior structure.
