

Karl Foerster Feather Grass

Create a stunning vertical effect with feathery stalks that emerge reddish brown in spring and turn a rich golden color in fall. Blooms two to three weeks earlier than common feather reed grass. Thrives in wet soils, yet tolerates drier conditions. Stalks make great cut flowers. Sterile seeds do not produce unwanted seedlings.

Foliage reaches 1 1/2 to 2 feet tall and wide; bloom stalks reach 6 feet tall.

Full Sun

Water deeply, regularly during first growing season to establish an extensive root system. Once established, water occasionally; more in extreme heat or containers.

- Do fertilize lightly every season, this perennial does not need a lot of extra care.
- Do provide adequate drainage and avoid “clay bowls” that are notorious for holding water and predisposing plants to the compost heap.

- Don't plant in too shady of a site; this perennial will handle full, hot sun.
- Don't prune perennial grass too late in spring or you will cut off the coming season's new growth a chore best done in winter.
