

Skyline HoneyLocust

The light, dappled shade cast by the lacy foliage of this attractive tree is only one of its virtues. It also is durable and adaptable, tolerating a wide range of soil conditions as well as drought, and road salt, and has a lovely yellow fall color.

Reaches 45 feet high; 35 feet wide.

Full Sun

The first 6 weeks water plants as often as every 2-4 days at the start and at least a minimum of once per week. Beyond the 6 week establishment period, water once per week, unless rains occur.

- Do use sharp, clean tools when pruning; ragged stems and branches from dull tools leaves your plants open to various pest and disease.
- Do apply mulch to a depth of 3-4", your mulch ring should be the same diameter as the canopy above. Avoid piling the mulch around the trunk and creating the unfortunate "mulch volcano".

- Don't plant too deep; pay attention to the root flare in relation to the surrounding grade. A tree too high or deep will result in a tree under stress.
- Don't forget to do an annual inspection looking for any deadwood or damage seasonally.
