

## Dwarf Korean Lilac

A dwarf, spreading lilac with reddish purple buds that open to fragrant, pale lilac flowers. Blooms profusely in midseason, typically mid-May, and first flowers at an early age. Use in shrub borders with an evergreen background or plant in groups to form a low hedge.

Reaches 4-6 feet tall; 5-7 feet wide.

Full to Partial Sun

Water deeply, regularly during the first few growing seasons to establish an extensive root system; once established, maintain evenly moist soil.

**Remove spent flowers to promote continued bloom**

- Do prune after flowering to avoid cutting off next season's blooms.
- Do use sharp, clean tools when pruning; ragged stems and foliage from dull tools leaves your plants open to various pest and disease.

- Don't plant in too shady of a site; lilacs in general need access to hot afternoon sun.
- Don't neglect to provide adequate drainage and avoid "clay bowls" that are notorious for holding water and predisposing plants to the compost heap.
