

## Merrill Magnolia

Merrill Magnolia is bathed in stunning fragrant white star-shaped flowers with yellow eyes at the ends of the branches in mid spring before the leaves. It has dark green foliage throughout the season. The pointy leaves turn coppery-bronze in fall. The fruits are showy pink pods displayed from early to mid-fall.

Reaches 25-30 feet high; 30-35 feet wide.

Full Sun to Partial Sun

Once established, needs only occasional watering.

- Do keep pruning to a minimum; other than an odd branch here or there and deadwood you are free off such task with this tree.
- Do fertilize annually in spring when the flower buds begin to swell; a healthy plant is the best defense from pest/disease.

- Don't plant too deep; pay attention to the root flare in relation to the surrounding grade. A tree too high or deep will result in a tree under stress.
- Don't forget to do an annual inspection looking for any deadwood or damage seasonally.
