

Bowhall Red Maple

The Bowhall Maple is a columnar maple that is suitable as a street tree or for narrow spaces. Its canopy is sturdy and tightly formed. The Bowhall is notable for its fall color. Leaves change from yellow to orange to red prior to leaf drop.

Reaches to 40 feet tall; 15 feet wide.

Full Sun

Low trickle base to the root zone every other day for the first 2 weeks. Weaning to every 3rd week 1x per month; supplementing during times of drought.

Maples are considered 'bleeders' and are best pruned in early winter or during summer.

- Do use sharp, clean tools when pruning; ragged stems and branches from dull tools leaves your plants open to various pest and disease.
- Do apply mulch to a depth of 3-4", your mulch ring should be the same diameter as the canopy above. Avoid piling the mulch around the trunk and creating the unfortunate "mulch volcano".

- Don't plant too deep; pay attention to the root flare in relation to the surrounding grade. A tree too high or deep will result in a tree under stress.
- Don't forget to do an annual inspection looking for any deadwood or damage seasonally.
