

Redpointe Red Maple

Beautiful pyramidal maple with a relatively carefree growth habit, narrower than others, making it an excellent large shade tree for more compact landscapes. Highly adaptable, pest and disease-free, and resistant to leaf chlorosis. Dark green, heat resistant foliage turns a brilliant red in early autumn. Excellent cold hardiness.

Moderate growing; reaches 40-45 feet tall; 20-30 feet wide.

Full sun

Low trickle base to the root zone every other day for the first 2 weeks. Weaning to every 3rd week 1x per month; supplementing during times of drought.

Maples are considered 'bleeders' and are best pruned in early winter or during summer.

- Do use sharp, clean tools when pruning; ragged stems and branches from dull tools leaves your plants open to various pest and disease.
- Do apply mulch to a depth of 3-4", your mulch ring should be the same diameter as the canopy above. Avoid piling the mulch around the trunk and creating the unfortunate "mulch volcano".

- Don't plant too deep; pay attention to the root flare in relation to the surrounding grade. A tree too high or deep will result in a tree under stress.
- Don't forget to do an annual inspection looking for any deadwood or damage seasonally.
