

## Dense Yew

This dense, low, spreading shrub is an excellent basic foundation planting for a hedge, screen or border. The dark green foliage backs scarlet-colored, berry-like cones. A versatile and durable evergreen that provides year-round interest in the landscape and tolerates shearing well.

Slowly reaches 3-4 feet tall; 4-6 feet wide.

Partial to full sun

Water regularly - weekly, or more often in extreme heat.

- Do use sharp, clean tools when pruning; ragged stems and foliage from dull tools leaves your plants open to various pest and disease.
- Do provide adequate drainage and avoid “clay bowls” that are notorious for holding water and predisposing plants to the compost heap.
- Don’t forget to provide antitranspirant/antidesiccant in late fall. This is especially important to new plantings or exposed sites.
- Don’t fertilize or prune too late in the season; we want new growth to harden off before the season first frost.

# Hicks Yew

An excellent evergreen shrub for tall hedges and privacy screens. The long, upright-growing branches with dense, glossy, dark green foliage naturally form a narrow, columnar habit that works well as a foundation plant, or placed in pairs at entries or doorways.

Slowly reaches 10 to 12 feet tall, 3 to 4 feet wide.
